

## Information relating to surface water

**The information you provide assists us to appropriately balance the use of surface water resources.**

You may wish to obtain some information on river flows in our region. We operate a network of monitoring stations as do the National Institute of Water and Atmospheric Research. Electricity generation companies and some District Councils also operate stations in the regions.

A member of our environmental data or hydrology teams can advise you as to which organisation you should contact for your specific information needs, make that contact on your behalf, otherwise you may choose to undertake your own measurements.

Our hydrology equipment is not available for hire.

Provision of river flow information by our environmental data or hydrology teams will incur a fee that covers the costs of extracting the appropriate statistics. These costs are not included in the consent application or monitoring charges.

Actual costs will vary depending on the availability of flow records and the analysis required. Costs will be discussed with you prior to our environmental data or hydrology team undertaking any work on your behalf.

**Horizons Regional Council's environmental data, hydrology or consents teams can be contacted on free phone 0508 800 800 for more information.**
