

Appendix D

Examples of 1:10,000 scale maps for the Water Management Zones.

At the request of the Hearing Panel I have created a series of maps for the Region at 1:10,000 scale containing Water Management Zone and Sub-zone boundaries with the cadastral parcels and aerial photography.

The total number of maps required to cover the entire Region would be 2,367 A3 landscape maps. I have included three examples of these maps below.

In my opinion these maps do not provide more certainty than the ones in the track changes version of Schedule Ba for property owners on the edge of a Water Management Zone or Sub-zone boundary. As such I recommend the adoption of the electronic 'point click plan' to alleviate the issue associated with this uncertainty.
