	riptive Specification		
G1.	<ul> <li>The activity authorised by these permits shall be undertaken in general accordance with the concepts, parameters, drawings, specifications, statement of intent, proposed mitigation measures and other information supplied in the application received on 1 April 2015 and supplementary documents received:</li> <li>a. On 11 December 2015, being a response to the s92 further information request of June 2015;</li> <li>b. On 27 February 2017, being a response to the s92 further information request of November 2016; and</li> <li>c. On 29 June 2018, being a new application (APP-2018201909.00) for the construction of a wetland and associated structures; and</li> <li>d. On 21 September 2018, via email, being a response to the section s92 further information request relating to APP-2018201909.00.</li> </ul>		
G2.	<ul> <li>The wastewater discharge authorised by these permits shall be limited to:</li> <li>a. A maximum 12 month rolling median daily (midnight to midnight) discharge of 640 cubic metres;</li> <li>b. A 95<sup>th</sup> percentile daily flow of [Applicant to indicate] m<sup>3</sup>/day,</li> <li>at approximate map reference BN35:280-977.<sup>1</sup></li> </ul>		
Envir G3.	<b>conmental Standard</b> Within three months of commencement of these permits the Consent Holder shall prepare a plan detailing the final plant structured optimisation programme (SOP) for the Eketähuna Treatment Plant and submit it to the Manawatu-Wanganui Regional Council's Regulatory Manager. The optimisation programme shall be completed by 1 July 2019. The SOP shall specify a suitably qualified operations technician who will implement the structured optimisation programme. The SOP plan shall describe the measures and steps required to optimise the treatment plant components so that the treatment plant is able to meet the conditions of this permit and shall specify a stepwise optimisation process of the Chemical dosing system, lamella clarifier operation, micro-filter operation and UV disinfection, which shall be implemented as part of the optimisation programme.	HRC G3 not applicable here as cannot optimise something that is not built yet. Performance testing is included. Replaced with Condition put forward based on evidence of Mr Crawford from original hearing	G3. 	<b>ADVICE NOTE:</b> The Manawatu-Whanganui Regional Council will consider the OMP and either certify that the OMP is in accordance with Condition G4 and the other conditions of this and the associated permits, or advise the Consent Holder that the OMP does not meet the conditions. Technical certification is limited to those matters relating to how the applicant intends to comply with the conditions of consent.		
G7.	The consent holder shall undertake all activities authorised by these permits in accordance with the certified OMP.		
G8.	The consent holder shall ensure that a copy of the OMP, including any amendments, is kept onsite. This copy shall be updated within 5 working days of any amendments being made to the design, operation or management of the treatment system. Any updates to the Plan shall be forwarded to the Manawatu-Wanganui Regional Council within two weeks of an amendment.		
G9.	The Consent holder shall maintain a register recording all updates made to the OMP, including details of the changes made, date the change was made and who authorised the change. The register shall be made available to Manawatu-Wanganui Regional Council's Regulatory Manager on request.		
G10.	Any changes to the OMP that relate to clauses (c), (f), (g)-or (h) of Condition G4 shall only be undertaken if the amended are certified by Manawatu-Wanganui Regional Council's Regulatory Manager in accordance with <b>Condition G6</b> .	Issue with (g) as any change in personnel will need HRC certification. That will provide a very inefficient system with regular certification of personnel changes.	
G11.	Within three months of commencement of these permits, the permit holder shall install and maintain signage advising river users that treated wastewater is being discharged at the location.	Suggest delete "at any point" as it is uncertain.	
	<b>ADVICE NOTE:</b> Signage shall also be installed and maintained at any point where there is public access within 500 metres downstream of the discharge location advising that treated wastewater is being discharged within 500m upstream.		
G12.	Within five years of commencement of these permits, the permit holder shall have completed an investigation into alternative methods of treatment and discharge, including land based disposal. The alternative disposal feasibility study shall inform the permit holder's decision on the best practicable option for treatment and disposal from the Eketāhuna Wastewater Treatment Plant. The findings of the feasibility study shall be provided to the Tararua District Wastewater Forum (TDWF), and to the Regulatory Manager of the Manawatu-Wanganui Regional Council within two months of its completion.	Proposing within six years to allow for more monitoring of proposed system.	Within six years of com holder shall have comp methods of treatment a treatment or disposal. shall inform the permit option for treatment an Treatment Plant. G13.	Within three years of commencement of the discharge of treated wastewater from the wetland to the Makakahi River permits, the permit holder shall have completed a recreational user's investigation of the Makakahi River 500m upstream and 500m downstream of the discharge point and mixing zone.		
G14.	The permit holder shall inspect the Sewage Treatment Plant at least once weekly for the term of these permits for the purpose of attending to all operational requirements, monitoring and maintenance. A record of these visits and any maintenance undertaken shall be kept in a log book, available to the Manawatu-Wanganui Regional Council's Consents Monitoring Officer upon request.		
<del>G15.</del>	<b>By 1 July 2020,</b> the Consent Holder shall have completed a study identifying the measures to be undertaken to reduce infiltration and inundation (I&I) entering the wastewater network. The results of this study shall be included in the Annual Environmental Report of that year (2020).	New condition proposed, based on evidence of Mr King recognising that TDC already have a work programme regarding I&I in place.	By 31 October in years shall forward details of undertaken in the previ forward works program network.

commencement of these permits, the permit ompleted an investigation into alternative nt and discharge, including land based re-use, al. The alternative disposal feasibility study mit holder's decision on the best practicable and disposal from the Eketāhuna Wastewater he findings of the feasibility study shall be arua District Wastewater Forum (TDWF), and anager of the Manawatu-Wanganui Regional nonths of its completion.

ars 2021, 2023 and 2025 the Consent Holder of inflow and infiltration investigations evious financial years, and details of any amme for repairs or upgrades to the Council

		Advice Note: Forward expected to be in gene Infliltration and Inflow ( (or relevant updates)
<del>G16.</del>	The infiltration and inundation (I&I) study required by <b>condition</b> Error! Reference source not found. shall i	
	nclude a remedial works programme and timescale for achievement of reduction of infiltration and inundation into the wastewater system.	
G17.	By 31 October of each year, the Consent Holder shall provide the Manawatu-Wanganui Regional	
	Council's Consents Monitoring Team and the Tararua District Wastewater Forum (TDWF), an Annual	
	Environmental Report for the 12 month period ending 30 June. The monitoring report shall include but	
	shall not be limited to:	
	<ul> <li>A summary of analyses and records collected in accordance with conditions of these permits, including all sampling conditions;</li> </ul>	
	b) A summary of the daily inflow and outflow volumes for the oxidation ponds including a comment	
	on the relative volumes;	
	c) An assessment of the analyses and records;	
	d) An assessment of the effects on both groundwater and surface water including an assessment of	
	those water quality analyses under Conditions DSW10, DSW16, 0 and 0 and against any	
	relevant targets in Schedule E of the One Plan.	
	e) A report on the effects of the discharge on the benthic biota of the Makakahi River as required by	
	condition DSW17 and DSW21 of the discharge to water permit;	
	f) A comment on the extent to which conditions of these permits have been complied with;	
	g) A record of any complaints that are received relating to the operation of the Oxidation ponds;	
	h) Report on trends as a result of permit monitoring.	
	<b>ADVICE NOTE</b> : For remedial actions to be undertaken an overview on timing of actions, including reference to appropriate Asset Management Plans would be required	
G18.	Within 3 months of these permits commencing, the Permit Holder shall install a pond level sensor	
	alarm on Pond 2. The sensor shall provide a continuous measure of pond level to the Supervisory	
	Control and Data Acquisition (SCADA) system. The sensor shall provide the following alarm functions:	
	a. Alert level at 500mm below overflow,	
	b. High level at 300mm below overflow, and	
	c. High-high level (Overflow imminent) at 100mm below overflow.	
	ADVICE NOTE: In relation to the sensor, the measurement and poling rates need not be high.	
Tararu	ua District Wastewater Forum (TDWF)	
G19.	The permit holder shall initiate the inaugural meeting of the Tararua District Wastewater Forum (TDWF)	
	on or before 31 October in the year either or both of the Pahiatua (APP-1993001253.02) or Eketāhuna application (APP-2005011178.01) commence.	
	<b>ADVICE NOTE:</b> The inaugural TDWF meeting shall be initiated following commencement of the earliest application to be authorised.	

## ard works programmes assessment would be eneral accordance with the principals of w Control Manual. Water New Zealand, 2015

G20.	•	mit holder shall secure the services of an independent facilitator who is responsible for ng discussions any time the forum meets.

-			
	ADVICE NOTE: Compliance shall be based on grab samples taken immediately downstream of the UV treatment plantprior to the wetland outlet structure.		
			By 1 October 2021
DSW4.	By From 1 July 2020, the treated wastewater shall meet the following standards in the Makakahi River as measured at "Makakahi at Hamua" flow recording station is at or below the 20 <sup>th</sup> flow exceedance percentile flow:		
	a. The concentration of <i>E.coli</i> shall not exceed 50-260 MPN/100ml in more than 8 out of 12 samples, and no more than 200-1000 MPN/100ml in more than 2 out of 12 consecutive samples.		
	b. The concentration of DRP shall not exceed 0.5 g/m <sup>3</sup> in more than 8 out of 12 samples, and no more than $0.71.0$ g/m <sup>3</sup> in more than 2 out of 12 consecutive samples.		
	<b>ADVICE NOTE:</b> Compliance with condition DSW4 will be based on the flow at the "Makakahi at Hamua" flow recording station is less than 8,293 l/s. Compliance for DRP shall be based on grab samples taken immediately prior to the wetland outlet structure and for E.coli immediately downstream of the UV treatment plant.		
DSW5.	By 1 July 2020 August 2021, all wastewater discharge into the Makakahi River shall pass through the primary screening unit, the oxidation ponds, be treated by the UV disinfection unit, and pass through the constructed wetland.		
DSW6.	The UV disinfection unit shall be equipped with a UV sensor to monitor UV transmission or intensity through the wastewater during operation.		
DSW7.	The UV sensor shall be monitored continuously, with an alarm notifying the consent holding is the applied UV intensity is operating ineffectively.		
Receiv	ing Water Quality	As discussed at original hearing	
DSW8.	The treated wastewater discharge shall not cause any of the following in the Makakahi River at the river flows outlined in Table 1, and after the reasonable mixing distance of 100 metres:		
	a) the production of any conspicuous oil or grease films, scums or foams, or floatable or suspended materials; or		
	b) bacterial and / or fungal slime growths visible to the naked eye as plumose growths or mats; or		
	c) any emission or objectionable odour; or		
	d) render the receiving water unsuitable for consumption by farm animals; or		
	e) a more than minor adverse effect on aquatic life; or		
	f)d) a change in horizontal visibility, defined as the horizontal sighting range of a black disc, by more than 20%; or		
	g)e)the DO concentration to fall below 80 % saturation; or		
	h)f)the ammoniacal nitrogen (NH <sub>4</sub> -N) concentration to exceed 2.1 grams per cubic metre at any time, or to exceed 0.4 grams per cubic metre on an rolling annual average; or		
	i)g)the average POM concentration to exceed 5 g/m <sup>3</sup> at flows below median; or		
	j)h)the Chlorophyll a. to exceed 120 mg/m <sup>2</sup> on more than 8% of sampling occasions, on the basis of monthly measurements taken over a period of at least 36 months; or		

Condition       Contaminant or Effect (abbreviated, for reference only)       River Flows       Zone of Reasonable Mixing downstream         (a)       Films, scums, foams       All       100 metres         (b)       Bacterial/fungal slime growths       All       100 metres         (c)       Objectionable odour       All       100 metres         (e)       Unsuitable for farm animals       All       100 metres         (f)       Effects on Aquatic Life       All       100 metres         (g)       Horizontal visibility       All       100 metres         (h)       Dissolved Oxygen       All       100 metres         (h)       Dissolved Oxygen       All       100 metres         (ih)       Particulate organic matter       At or below       100 metres         (ih)       Periphyton biomass       All       100 metres         (m)       Periphyton cover       All       100 metres         (o)       Toxicants       All       100 metres         (p)       Soluble carbonaceous BOD <sub>5</sub> At or below the 20th FEP       100 metres         ADVICE NOTE:       The River flows in Table 1 are those measured at the "Makakahi at Hamua" water level recording station and the 20th flow exceedance percentile at the station is 8,293 l/s. Effluent Monitoring		
DSW10.DSW9. To enable the sampling of the treated wastewater, easy and safe access to a sampling port(s) shall be provided		
by the Consent Holder and maintained as close as is practicable to those sampling locations specified in <b>condition DSW16</b> .		
DSW11.DSW10. The consent holder shall take monthly grab samples of the wastewater immediately prior to upstream of the	Change to downstream of	
wetland discharge structure and downstream of the UV treatment unit and the samples shall be analysed for the constituents	treatment wetland,	
and at the frequencies listed in Table 2 to assess compliance with Condition DSW8-DSW8_and DSW9-DSW1_of these	with exception of e.coli	
consents.	0.001	
DSW12.DSW11. Within three months of commencement of these consents, the consent holder shall have a flow meter		
installed, by an accredited installer. The installer must ensure the flow meters are located on the inflow and outflow line.		
The flow meters must have a pulse counter output traceably calibrated to +/- 5 % or better. The flow meter shall be capable of		
providing daily inflow and discharge volumes use as well as a pulse counter output. The flow meter shall be positioned to		
measure the entire volume of treated sewage effluent discharge into the surface water of the Makakahi River discharged		
under authorisation of these consents.		
DSW13.DSW12. The consent holder shall ensure the flow meter required by Condition DSW11, is installed by an Irrigation New		
Zealand Blue Tick accredited installer and be installed in accordance with the standards set out in the Ministry for the		
Environment Guidelines Resource Management (Measurement and Reporting of Water Takes) Regulations 2010.		
DSW14.DSW13. Within three months of commencement of these consents, the consent holder shall install and maintain, in a		
fully operational condition, a GPRS data logger / telemetry unit compatible with the Manawatu-Wanganui Regional Council's Telemetry system on the discharge line traceable to +/- 5 % or better.		
ADVICE NOTE: This unit, which is attached to the pulse counter output, will be monitored by the Manawatu-Wanganui Regional Council to ensure compliance with the resource consent conditions.		
DSW15. DSW14. Where telemetry equipment fails for reasons other than fair wear and tear, replacement or repair will be at the		
consent holder's expense and replacement will be required within seven days.		
DSW16.DSW15. With the exception of network power failure or network maintenance the consent holder shall ensure that power supply is maintained at the site at all times.		
<b>ADVICE NOTE:</b> If power supply is lost at the site due to consent holder negligence or abuse and telemetry units require recalibration by Manawatu-Wanganui Regional Council staff the costs associated will be recovered from the consent holder.		
River Monitoring	Downstream	
DSW17.DSW16. The consent holder shall take samples from the Makakahi River at approximately T25:380-592; BN35:280-975	monitoring point likely to be greater than	
90 metres upstream (Site A) and at approximately T25:383-595; BN35:283-977 100 metres downstream (Site B) of the	100m. Assume that	
discharge point to the Makakahi River, a sample of the discharge prior to entering the wetland and a sample of the discharge	the map provided in	
at the Discharge Point as shown on <b>Plan APP-200511178.01</b> A <sup>3</sup> attached to and forming part of these consent conditions.	Mr Brown's evidence would be attached

<del>b)</del>	Makakahi River at a site located in the first riffle within 200 metres upstream of the discharge point to the Makakahi River (Site A); and <u>c) The Makakahi River at a site located in the first riffle after 100 metres downstream of the discharge point to</u> the Makakahi River (Site B); and <u>.</u>	
subsamplin	Macroinvertebrate sampling referred to in Condition DSW18 is to be undertaken <b>annually</b> between <b>January to</b> usive. The macroinvertebrate sampling shall follow Protocols C3 (Hard-bottomed quantitative), P3 (full count with g option) and QC3 (Quality control for full count with subsampling option) from the Ministry for the Environment's for sampling macroinvertebrates in wadeable streams" (Stark et al. 2001). This shall involve:	
a) collec	ction of 5 replicate 0.1 m <sup>2</sup> Surber samples at random within a 20 m section of riffle habitat at each sampling site.	
	ount of the macroinvertebrate taxa within each replicate sample to the taxonomic resolution level specified for use Macroinvertebrate Community Index (MCI).	
<u>c)</u> enum	neration of the results as taxa richness, MCI, QMCI, %EPT taxa and %EPT individuals.	
<del>c)<u>d)</u></del>	Analysis of the QMCI results using equivalence testing at the 20% interval	
monthly as filamentous	The consent holder shall have an appropriately experienced and qualified freshwater ecologist undertake sessments of the percentage cover, biomass, chlorophyll a, AFDW and community composition of periphyton, a algae and cyanobacterial mats in riffle habitat, as close as possible to the sites selected under <b>Condition DSW18</b> ardless of flows. The periphyton and algae assessment is to include:	
pi sa	visual assessment of the percentage cover of both filamentous algae and algal mats (to the nearest 5%) at 5 bints across each of four transects encompassing riffle habitat and extending across the width of the river at each ampling site. The visual monitoring methods shall follow the protocols outlined in Appendix 2 of "A periphyton ionitoring plan for the Manawatu-Wanganui Region" (Kilroy et al. 2008). Reported estimates shall include:	
i.	percentage cover of visible stream or river bed by bacterial and/or fungal growths (sewage fungus) visible to the naked eye;	
ii.	percentage cover of visible stream or river bed by filamentous algae more than 2 cm long;	
iii.	percentage cover of visible stream or river bed by diatoms or cyanobacteria mats more than 0.3 cm thick;	
iv.	percentage cover of visible stream or river bed by diatoms less than 0.3 cm thick; and	
v.	percentage cover of visible stream or river bed that is clean.	
D	the collection of a periphyton sample at the same established monitoring sites and transects as defined in Condition SW18 above, using method QM-1b from the Stream Periphyton Monitoring Manual (Biggs & Kilroy 2000). Inalysis of periphyton samples shall follow the Biggs & Kilroy (2000) guidelines for <i>chlorophyll a</i> analysis.	
	The consent holder shall advise the Manawatu-Wanganui Regional Council's Regulatory Manager if the low flow conditions prevent the monitoring required by <b>Conditions DSW18, DSW20 and DSW21</b> within five days on being made that the monitoring cannot be undertaken.	
<b>Operational Restri</b>	ctions	
DSW24.DSW23. sampling si	Within three months of commencement of these consents, the consent holder shall arrange safe access to ites consistent with the requirements of Conditions DSW16 and DSW18 of these consents. Such safe access	

shall be maintained at all times for the duration of these consents, with the exclusion of times when high flows in the River may render access hazardous.		
Post-Development Assurance DSW25: DSW24At least once every five years, or earlier if there is an unexplained increase in flows, the Consent Holder must review records of wastewater flows received at the treatment plant to ensure there has been no unexplained increase in flows (based on a five year running average) that could adversely affect treatment plant performance. The results of the review must be included in the next annual monitoring report to the Regulatory Manager. In the event that the review shows that unexplained increased flows could result in adverse effects on treatment plant performance, the permit holder must investigate the reasons for the unexplained increased flows and put in place remedial works as necessary. In the event there is disagreement between the permit holder and consent authority in relation to the need for investigations and/or remedial works, the permit holder must commission an independent review by a suitably qualified expert acceptable to the consent authority.	No evidential basis provided for this condition. Applicant's position is that the I&I programme already undertaken by TDC is sufficient.	
DSW26.DSW25. The consent holder shall notify the Manawatu-Wanganui Regional Council's Environmental Protection Manager within two working days of any non-compliance occurring or when it becomes certain that a breach of consent conditions is about to occur. For conditions requiring compliance with a particular water quality standard, notification is required within two working days of receipt of the water quality analysis from the Laboratory.		
Monitoring Provision DSW27.DSW26. The consent holder shall make results of monitoring undertaken required by Conditions DSW16 and DSW18 of these consents available to the Manawatu-Wanganui Regional Council's Regulatory Manager on request, and data records for each three month period ending March, June, September and December shall be forwarded to Manawatu-Wanganui Regional Council's Regulatory Manager in a suitable electronic format, within 14 days after the end of each three monthly period.		
<ul> <li>DSW28.<u>DSW27.</u> At least six months prior to the assessment of water quality being required pursuant to condition DSW1 the permit holder shall engage an independent panel comprising three appropriately qualified and experienced scientists:         <ul> <li>a) one scientist nominated by the permit holder;</li> <li>b) one scientist nominated by Manawatu-Wanganui Regional Council; and</li> <li>c) one independent scientist (and, for these purposes, an independent scientist shall exclude any person who has presented evidence to the hearing of this permit).</li> </ul> </li> <li>Should the engagement of any of the appointed scientists cease the party who nominated that scientist shall nominate a further appropriately qualified and experienced replacement.</li> </ul>	Applicant's position is that this is not needed here given relative effects of discharge. Annual reporting is undertaken that will assess compliance etc. As outlined at original hearing.	
<ul> <li>DSW29. The independent panel engaged pursuant to Condition DSW28 shall, no later than 5 years following the upgrades are completed, undertake an assessment of the water quality, periphyton, and macroinvertebrate monitoring data collected during the monitoring periods.</li> <li>The assessments shall:         <ul> <li>a) examine the effects of the discharge on the Schedule B values identified in the One Plan for this reach of the Makakahi River;</li> </ul> </li> </ul>		
b) Consider any reports received from the Liaison Group;		

c) Consider the results of macroinvertebrate and periphyton monitoring undertaken in accordance with Conditions		
DSW19, DSW20, DSW21 and DSW22;		
d) Consider past and likely future compliance with Conditions DSW3 and DSW4.		
e) Provide recommendations on the monitoring frequency and monitoring parameters for the remainder of the permit;		
f) Provide recommendations on any changes required to the discharge regime, and effluent quality (including nutrient		
concentrations and loads discharged to the Makakahi River),so as to minimize adverse effects on the One Plan's		
Schedule B values for the Makakahi River.		
g)a) The findings of the independent panel's assessment shall be submitted to the Regulatory Manager and the		
TDWF by 1 July 2022.		
DSW30.DSW28. By 31 July each year commencing 31 July 2017 2020 the consent holder shall prepare a report that		
summarises and assesses all of the monitoring information required under Conditions DSW16, DSW18, Error! Reference		
source not found. and DSW21 of these consents. The provision of this report should be included in the Annual		
Environmental Report required by condition G17 of the general conditions.		
DSW31.DSW29. The Report required by condition DSW28 will be provided to the Manawatu-Wanganui Regional Council's		
Regulatory Manager by <b>31 October</b> of each year.

3.	Condition Schedule ATH-2015200247.00 and ATH-2018202081.00 – Eketāhuna Wastewater Treatmei to Land Permit – Pond and Wetland Seepage		
HRC		Applicant Comment	
DLW1 the da based	ronmental Standards 1. Within three months of commencing this permit, the Consent Holder shall monitor, calculate and record aily rate of leakage from the WWTP pond system to groundwater. This leakage rate shall be determined 1 on a water balance calculation incorporating monitored daily WWTP pond influent and effluent flows and climate data (rainfall and evaporation).	Very unlikely to be able to accurately determine daily seepage rates given accuracy measure of meters. Further, as likely constructed in mudstone bedrock unlikely for leaking to be occurring. Alternative is recommended	<ul> <li>Permeability Investigations</li> <li>Within six months of commencement of shall submit to the Manawatu-Wanganui</li> <li>Manager a plan to investigate the rate of treatment ponds. The plan shall include, I</li> <li>a. A methodology for a water balance to ponds. As a minimum inflows and out shall be recorded over a 12 month per Consideration to be given to measuring and recording of representative evaporemethod to determine rate of leakage of b. Geotechnical investigations adjacent</li> <li>c. The methodology proposed shall be provide the rate of leakage of th</li></ul>
accor Mana	2. The Consent Holder shall provide daily Pond Seepage rate data, as monitored and calculated in dance with consent condition 2 above, on a quarterly basis, in a format that is compatible with the watu-Wanganui Regional Council data system. 3. <b>By 1 July 2020,</b> all wastewater treatment ponds must have a lining with a permeability not exceeding 1	Not lining	Buy 1 July 2020 the Consent Holder shall Manawatu-Wanganui Regional Council's Tararua Wastewater Forum detailing the investigations. The report shall include bu a. As assessment of calculated seepage effects on groundwater; and b. A recommendation for ongoing monito
	m/s. 1. Following completion of the wastewater pond lining as required by condition 0, the Consent Holder shall take six monthly monitoring of a sub-liner drainage/leakage detection system.		
perme	5. By 1 July 2020 No later than 1 May 2021, the wetland base shall be constructed such that the eability of the wetland shalldoes not exceed 1.4 x 10 <sup>-7</sup> m/s. <u>The permeability of the constructed layer shall nfirmed by a suitably qualified engineer.</u>		
	6. By 1 July 2020, the nitrate concentration as measured at the wetland outlet shall be reduced by 50% ared to the inflow to the wetland.		

of this Permit the Consent Holder ai Regional Council's Regulatory of leakage of all the existing e, but not be limited to: to be undertaken for each of the outflows from the treatment system beriod, as shall local daily rainfall. uring pond levels and measurement sporation rates; or other suitable e of each of the treatment ponds. In to the existing ponds e peer reviewed by an independent

all submit a report to the 's Regulatory Manager and he findings of the permeability but not be limited to: age rates and assessment of

nitoring if required.

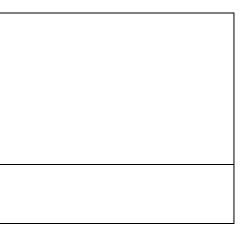

DLW7. By 1 July 2020, the Consent Holder shall ensure that other contaminants in the discharge as listed in condition 0 and as measured at the wetland outlet shall not be exacerbated as a result of the operation of the wetland.		
Monitoring Provision		
DLW8. Samples collected under Condition 0 shall be analysed for the following parameters: a. Total Phosphorus (TP) b. Dissolved Reactive Phosphorus (DRP) c. Total Nitrogen (TN) d. Nitrate Nitrogen (NO3-N) e. Nitrite Nitrogen (NO2N) f. Ammoniacal Nitrogen (NH\$-N) g. Escherichia coli (E. coli) h. Dissolved oxygen (field measurements) i. Electrical Conductivity (EC) (field measurements) j. Chloride k. Static water level l. pH (field measurement and laboratory measurement) m.a. Soluble Carbonaceous Biological Oxygen Demand (ScBOD5)		
DLW9. Results of this monitoring shall be transferred within ten working days of their receipt to the Manawatu- Wanganui Regional Council in a format compatible with the Manawatu-Wanganui Regional Council systems. DLW10. The results from the monitoring required by condition 6 of this permit shall be collated, analysed and interpreted and included in the Annual Report, as required by condition G17 in the General Conditions.		
<ul> <li>DLW11. Wetland Development and Maintenance</li> <li>Within 12 months of commencement of this permit, this consent holder shall submit to the Manawatu-Wanganui Regional Council a technical management plan (TMP) for certification for both the treatment and biodiversity wetlands. The wetlands are to be designed in general accordance with the application and in particular Appendix III of APP-2018202081.00 – Eketähuna WWTP Wetland Proposal. The management plan shall include but not be limited to information demonstrating the following matters:</li> <li>Construction and Establishment phase of treatment wetland</li> <li>a. Final details of the construction design of the treatment wetland;</li> <li>i) The design shall demonstrate that, once constructed, the average water depth shall not exceed 300mm and the maximum water depth shall not exceed 500mm.</li> <li>ii) A functional explanation of the hydraulic structures (weirs) that will be utilised to ensure the depths are not exceeded shall be provided.</li> <li>ii) Details of reinforced flood sills for the upstream and downstream ends</li> <li>b. Final design details of the weirs, each weir shall be built with a reinforced spillway;</li> <li>i) The final design shall demonstrate that the width to length ratio of between 3:1 and 5:1 will be achieved.</li> </ul>	Applicant's position is that detailed performance monitoring is not required. Primary purpose is for allowing land passage prior to discharge. Cultural monitoring is proposed. As the applicant has recommended that the compliance monitoring point be at the end of the wetland prior to the outlet structure. This is sufficient to avoid effects on the river. Not relying on the wetland for treatment, but good	

C.	The final treatment wetland surface area shall be not less than 5500m <sup>2</sup> ;	design principles	
d.	The plan shall contain a specific planting plan to demonstrate how the vegetation to be planted shall	are proposed. Note that do not	
	be established within 6 months of the completion of the bulk earthworks associated with the treatment	require performance	
	wetland such that the treated wastewater shall pass through the wetland no later than <b>1 July</b>	standards in between treatment	
	2020 <u>2021</u> .	processes at	
e.	Planting in the treatment wetland shall be at a density of 2 plants per square metre and the entire	treatment plants.	
	base of the wetland shall be planted.		
f.	The plan shall demonstrate that the topsoil stripped to allow for the formation of the wetland shall be		
	re-laid prior to planting.		
g.	The plan shall demonstrate that the topsoil stripped to allow for the formation of the wetland shall be		
	re-laid prior to planting;		
h.	Demonstrate how the treatment plant shall be managed so as to allow for gradual introduction of the		
	treated wastewater to the treatment wetland to allow for planted seedlings to adapt to the fully		
	saturated conditions.		
i.	Demonstrate how the formation of preferential flow paths will be prevented within the wetland, and if		
	preferential flow paths do develop, the process that will be followed to overcome the problem.		
j.—	A detailed performance monitoring programme including remedial actions to be undertaken should		
	the wetland not perform as designed.		
k.	Information demonstrating that 95% of the expected maximum treated wastewater flow shall be		
	retained in the wetland for not less than $72^4$ hours.		
AD	<b>DVICE NOTE:</b> While a length to width ration of between 3:1 and 5:1 is optimal for the purposes of		
de	sign, a ration of up to 10:1 is acceptable and may be necessary in portions of the wetland depending		
on	local ground conditions, such as substrate encountered.		
DLW12. N	Ianagement Plan for Treatment Wetland		
	n <u>growing in the wetted area of in</u> the treatment wetland shall be maintained so that the wetted areait		
remains o	pen to sunlight.		
	the codes vegetation within the wetland people to be expected to full supplies to retain its viger		
	ote: the sedge vegetation within the wetland needs to be exposed to full sunshine to retain its vigor. ation adiacent to the wetland could result in shading so should not be planted.		
	Once established the vegetation shall be pruned not less than once every five years. Material that is		
pruned sh	all be removed off site and disposed at an appropriate facility.		
DLW14. V	Veeding of the Treatment Wetland shall be undertaken manually.		
	fill planting shall be undertaken appually during the management phase to replace gase formed due		
	n-fill planting shall be undertaken annually during the management phase to replace gaps formed due ortality and to maintain vegetative cover of 95% in the wetland.		

<sup>&</sup>lt;sup>4</sup>-As per the information contained in Kahungunu's CVA

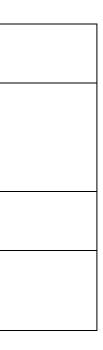

Post-development Assurance	Not proposing monitoring bores	
[Following confirmation from the applicant, condition 14 may not be required.]		
DLW16. Should the consent holder not achieve Condition 0 (the pond lining condition) by 1 July 2020, a plan to		
install and monitor groundwater at one up-gradient and two down-gradient monitoring wells will be provided to		
Manawatu-Wanganui Regional Council for approval. Groundwater shall be monitored six-monthly for the suite of		
analytes listed in condition 0 above and shall commence no later than 1 September 2019.		
<b>DLW17.</b> The in-situconstructed permeability of the material should be confirmed and documented by an appropriately qualified engineer or scientist.		

4.	Condition Schedule ATH-2013011395.01 – Eketāhuna Wastewater Treatment Plant Discharge to Air Permit				
HRC		Applica Comme			
Pre-D	evelopment Assurance				
A1.	<ul> <li>Within two months of the granting of this permit, the permit holder shall provide an Odour Operation and Management Plan (OMP) for certification to the Regulatory Manager of the Manawatu-Wanganui Regional Council. The purpose of the OMP shall be to detail the measures the permit holder intends to take to avoid and mitigate the potential for odour from the wastewater treatment plant and ponds. The Operation and Management Plan shall include, but not be limited to the following:</li> <li>d. Details of regular inspections, plant maintenance and cleaning as required to avoid offensive odours;</li> <li>e. Responsibilities of on-site staff;</li> <li>f. Monitoring procedures, including reporting procedures for measuring dissolved oxygen (DO),</li> <li>g. A programme for developing reference diurnal DO profiles during the year;</li> <li>h. Contingency procedures in the event of equipment failures;</li> <li>i. A complaints procedure including;</li> <li>i. A stated commitment by the permit holder to respond to odour complaints within a specified time period,</li> <li>iii. Actions to be taken by the permit holder to verify complaints</li> <li>iv. Provision for recording the responses made by the permit holder to complaints, and</li> <li>v. Records of actions taken by the permit holder to address the sources of any verified dour.</li> <li>j. Management procedures for storage and handling of primary screenings and other solid wastes handling; and</li> <li>k. Procedures for monitoring and managing pond sludge levels to minimize the risk of upset conditions in the ponds resulting in offensive odours.</li> </ul>				
<b>Envir</b> A2.	<ul> <li>The discharge to air authorised by this consent shall not cause the emission of odour that in the opinion of the Manawatu-Wanganui Regional Council's Consents Monitoring Officer, is offensive or objectionable at or beyond the property boundary of the Eketāhuna Wastewater Treatment Plant site.</li> <li>ADVICE NOTE: When considering the objectionableness of odour, the Manawatu-Wanganui Regional Council will take into consideration the FIDOL factors: frequency, intensity, duration, offensiveness and location</li> </ul>				
A3.	<ul> <li>The Consent Holder shall keep a complaints register to record complaints relating to discharges of odour or contaminant gases to air arising from the Wastewater Treatment Plant. The register shall include: <ul> <li>a. The details of the complainant if given;</li> <li>b. The location of where the contaminant, e.g. odour, was detected;</li> <li>c. A description of the wind speed and direction when the alleged adverse effect was detected by the complainant;</li> <li>d. The date and time of the detection;</li> <li>e. The most likely cause of the discharge detected;</li> <li>f. The dissolved oxygen levels in both ponds; and</li> <li>g. If applicable, any corrective action undertaken by the Consent Holder to avoid, remedy or mitigate the adverse environmental effect detected by the Complainant.</li> </ul> </li> </ul>				
A4.	The Consent Holder shall advise the Manawatu-Wanganui Regional Council's Consents Monitoring Team within 24 hours of any complaints relating to air discharges being received.				

A5.	A copy of information recorded in the complaints register shall be included in the Annual Environmental Report required by <b>condition G17</b> of the General Conditions. The Annual Environmental Report shall be provided to the Regulatory Manager by 31 October of each year.	
A6.	The permit holder shall monitor Dissolved Oxygen in the wastewater storage ponds and ensure that the Dissolved Oxygen measurement is at or above 0.5 mg/L.	
	ADVICE NOTE: A calibrated handheld meter should be used to measure DO levels. Readings should be taken at similar times of the day as detailed in the Operational and Management Plan.	
A7.	In the event that any dissolved oxygen measurement is less than 0.5 mg/L, the consent holder shall take appropriate action to raise the dissolved oxygen as necessary to avoid the occurrence of an incident likely to cause non-compliance with <b>condition A2</b> .	
A8.	The consent holder shall advise the Consents Monitoring Team at least fourteen (14) days prior to undertaking any pond desludging works. The consent holder shall include as part of this advice, notice to the Regional Council of the method or methods proposed for sludge removal, the likely duration of the activity and the methods that will be used to manage the discharge of odour that has the potential to cause non-compliance with <b>condition A2</b> .	

5.	Condition Schedule ATH-2018202078.00, ATH-2018202079.00 and ATH-2018202080.00 – Eketāhuna Wastewater Treatment Plant Earthworks, Bund and D	version Consents
HRC		Applicant Comment
Pre-d	velopment Assurance	
EW1.	These land use consents and diversion permit authorise the following activities:	
	a. Land disturbance including earthworks and cut and fill associated with the creation of a wetland and diversion bund and discharge structure,	
	b. Diversion of the floodflows of the Makakahi River around the wetland and bund structure,	
	such works shall be undertaken on the property legally described as Lots 41 & 42 DP 1745, Pt Sec 22 Eketāhuna Settlement (the Golf Course) at approximate map reference NZTopo50 BN35:280-977 (hereafter referred to as the property).	
EW2.	The consent holder must undertake the activity in general accordance with the consent application including all accompanying plans and documents first lodged with the Manawatu-Wanganui Regional Council on <b>29 June 2018.</b>	
	ADVICE NOTE: Where there may be inconsistencies between information provided by the applicant and conditions of the resource consent, the conditions of the resource consent will apply.	
	<b>ADVICE NOTE:</b> Any variance from the location, design concepts and parameters, implementation and or operation may require a new resource consent or a change of consent conditions pursuant to section 127 of the Resource Management Act 1991.	
EW3.	The consent holder shall be responsible for all contracted operations related to the exercise of these resource consents, and shall ensure contractors are made aware of the conditions of these resource consents and ensure compliance with those conditions.	
EW4.	A copy of these consents shall be kept onsite at all times that physical works authorised by these resource consents are being undertaken and shall be produced without unreasonable delay upon request from a servant or agent of the Manawatu-Wanganui Regional Council.	
	ADVICE NOTE: An electronic version on a smartphone or tablet is acceptable	
EW5.	Prior to activities commencing as authorised by these resource consents, the consent holder shall appoint a representative(s) who shall be the Manawatu- Wanganui Council's principal contact person(s) in regard to matters relating to these resource consents. The consent holder shall inform the Manawatu- Wanganui Regional Council's Regulatory Manager of the representative's name and how they can be contacted, 5 working days prior to the resource consent being exercised. Should that person(s) change during the term of these resource consents, the consent holder shall immediately inform the Manawatu- Wanganui Regional Council's Regulatory Manager and shall also give written notice to the Manawatu-Wanganui Regional Council's Regulatory Manager of the new representative's name and how they can be contacted	
EW6.	The consent holder shall arrange and conduct a pre-construction site meeting and invite the Manawatu-Wanganui Regional Council's Regulatory Manager, the site representative(s) nominated under condition EW5 of these consents, the contractor, and any other party representing the consent holder prior to any work authorised by this consent commencing on site.	
	ADVICE NOTE: In the case that any of the invited parties, other than the site representative does not attend this meeting, the consent holder will have complied with this condition, provided the invitation requirement is met.	
EW7.	At least <b>20 working days</b> prior to the commencement of the activities authorised by these resource consents, the consent holder shall provide to the Manawatu-Wanganui Regional Council's Regulatory Manager for certification a copy of the design and specification of all works (diversion bund and discharge structure design plan), as prepared by an appropriately qualified and experienced Engineer.	

rsion Consents			
plicant mment			

- EW8. At least **20 working days** prior to the commencement of the activities authorised by these resource consents, the consent holder shall provide to the Manawatu-Wanganui Regional Council's Regulatory Manager a revised and updated "Erosion and Sediment Control Plan" (E&SCP). The E&SCP shall be based upon and include, specific principles and practices which are appropriate for the activities authorised by this consent and contained within the Greater Wellington Regional Council document titled "Erosion & Sediment Control Guidelines for the Wellington Region dated September 2002 & Reprint 2006". The updated E&SCP shall address the following aspects relating to the works:
  - a. Details of all principles, procedures and practices that will be implemented to undertake erosion and sediment control to minimise the potential for sediment discharge from the site, including flocculation;
  - b. The design criteria and dimensions of all key erosion and sediment control structures;
  - c. A site contour plan of a suitable scale to identify;
    - i. The locations of waterways;
    - ii. The extent of soil disturbance and vegetation removal;
    - iii. Any "no go" and/or buffer areas to be maintained undisturbed adjacent to watercourses;
    - iv. Areas of cut and fill;
    - v. Locations of topsoil stockpiles;
    - vi. All key erosion and sediment control structures;
    - vii. The boundaries and area of catchments contributing to all stormwater impoundment structures;
    - viii. The locations of all specific points of discharge to the environment; and
    - ix. Any other relevant site information
  - d. Construction timetable for the erosion and sediment control works and the bulk earthworks proposed;
  - e. Timetable and nature of progressive site rehabilitation and re-vegetation proposed;
  - f. Maintenance, monitoring and reporting procedures;
  - g. Rainfall response and contingency measures including procedures to minimise adverse effects in the event of extreme rainfall events and/or the failure of any key erosion and sediment control structures;
  - h. Procedures and timing for review and/or amendment to the E&SCP; and
  - Identification and contact details of personnel responsible for the operation and maintenance of all key erosion and sediment control structures.
- EW9. The E&SCP and the diversion bund and discharge structure design plan required by **condition EW7 and EW8** shall be certified in writing by the Manawatu-Wanganui Regional Council's Regulatory Manager prior to any activities authorised by these resource consents commencing.
- EW10. The consent holder shall undertake all earthworks authorised by this consent in accordance with the certified E&SCP and diversion bund and discharge structure design plan.

EW11. Any changes proposed to the E&SCP and diversion bund and discharge structure design plan required by **condition EW7 and EW8** shall be confirmed in writing by the consent holder and certified in writing by the Manawatu-Wanganui Regional Council's Regulatory Manager or his agent acting in a technical certification capacity, prior to the implementation of any changes proposed.

EW12.	The consent holder shall ensure that a copy of the certified E&SCP and diversion bund and discharge structure design plan, including any certified amendments, is kept onsite and this copy is updated within <b>five (5) working days</b> of any amendments being certified.	
EW13.	The consent holder shall contact the Manawatu-Wanganui Regional Council's Regulatory Team five (5) working days prior to the commencement of the construction, installation and disturbance works authorised by these consents and on completion of the works.	
	ADVICE NOTE: The Regulatory Team can be contacted on 0508 800 800, -OR- compliance.shared@horizons.govt.nz	
Enviro	nmental Standards	
EW14.	The consent holder shall ensure that the soluble aluminium concentration of any discharge from a sediment retention pond or decanting earth bund that is treated with an aluminium based flocculent shall not exceed 0.2 grams per cubic metre.	
EW15.	The consent holder shall ensure that the pH of any discharge from and sediment control structure treated with any flocculent shall be no less than 5.5 or greater than 8.5 pH units.	
EW16.	The consent holder shall ensure that the suspended solids concentration of any discharge from any sediment control device, including but not limited to sediment retention ponds, decanting earth bunds does not exceed 150 grams per cubic metre.	
	ADVICE NOTE: The above suspended solids consent limit does not apply during storm events where silt laden stormwater is discharging over the emergency spillway.	
EW17.	The consent holder shall ensure that sediment losses discharged from the site during storm events greater than the 5 per cent AEP are minimised by adhering to the E&SCP.	
EW18.	The consent holder shall ensure that all cleanfill material deposited at the site is free of pest plants identified in the Manawatu-Wanganui Regional Council Pest Plant Strategy, combustible, putrescible (except that cleanfill material may contain up to 5% by weight putrescible matter), degradable or leachable components, hazardous substances products or materials derived from hazardous waste treatment, hazardous waste stabilisation or hazardous waste disposal practices, materials that may present a risk to human health, or liquid waste.	
EW19.	The consent holder shall ensure that sediment losses to surface water arising from the exercise of these resource consents are minimised during the duration of the works and during the term of this consent. In this regard, erosion and sediment control measures shall be established and maintained in accordance with the certified E&SCP.	
EW20.	All earthmoving machinery, pumps, generators and ancillary equipment shall be operated in a manner, which ensures spillages of fuel, oil and similar contaminants are prevented, particularly during refuelling and machinery servicing and maintenance. Refuelling and lubrication activities shall be carried out away from any water body, ephemeral water body, or overland flow path, such that any spillage can be contained so that it does not enter surface water.	
EW21.	The consent holder shall ensure that, as far as practicable, all clean water run-off from stabilised surfaces including catchment areas above the site shall be diverted away from the exposed areas via a stabilised system to prevent erosion. The consent holder shall also ensure the outfall(s) of these systems are protected against erosion.	
EW22.	The consent holder shall ensure that all sediment laden run-off from the site is treated by sediment retention structures. These structures are to be fully operational before bulk earthworks commence and shall be maintained to perform at least at 80% of their operational capacity and be designed in accordance with the certified E&SCP.	

EW23.	The consent holder shall ensure that all erosion and sediment control structures are inspected on a weekly basis and within 24 hours of each rainstorm event
	that is likely to impair the function or performance of the controls.

- EW24. The consent holder shall carry out monitoring and maintenance of erosion and sediment controls in accordance with the conditions of these resource consents and shall maintain records detailing:
  - c. The date, time and results of the monitoring undertaken; and
  - d. The erosion and sediment controls that required maintenance; and
  - e. The date and time when the maintenance was completed.

These records shall be provided to the Manawatu-Wanganui Regional Council's Regulatory Manager at all reasonable times and within 72 hours of a written request to do so

EW25. Earthworks shall not be conducted during the period **1 May to 30 September** inclusive during any year that these resource consents are current, apart from necessary maintenance works, unless certified in writing by the Manawatu-Wanganui Regional Council's Regulatory Manager.

ADVICE NOTE: Maintenance is defined in the One Plan 2016 (Change 1).

EW26. Requests to undertake earthworks during the period **1 May to 30 September** inclusive, for any year that these resource consents are current, shall be submitted in writing to the Manawatu-Wanganui Regional Council by 1 April and shall be in the form of amendments to the certified E&SCP in accordance with condition **EW8** of this consent.

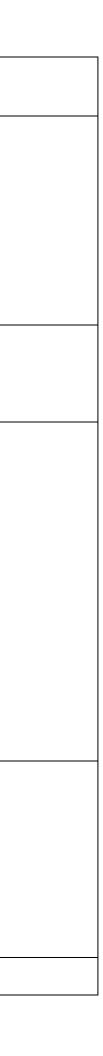

**ADVICE NOTE:** In considering a request for the continuation of winter earthworks, the Manawatu-Wanganui Regional Council will consider a number of factors; including:

- The nature of the site and the winter soil disturbance works proposed;
- The quality of the existing/proposed erosion and sediment controls;
- The compliance history of the site/operator;
- Seasonal/local soil and weather conditions;
- Soil moisture content and runoff/ponding potential;
- Effects on the cultural values of tangata whenua;
- Sensitivity of the receiving environment; and
- Any other relevant factor.

EW27. The works shall remain the responsibility of the Consent Holder and be maintained to ensure that:

- a. any erosion, scour or instability of the stream bed or banks that is attributable to the works carried out as part of this consent is remedied by the consent holder within **10 working days**;
- b. fish passage is not impeded as a result of the works; and
- c. the works shall not adversely affect the ability of the stream to convey flood flows or floating or flood borne debris and shall remain substantially free of debris.

Post development Assurance

EW28.	One month following completion of wetland construction, the Consent Holder shall ensure that the wetland is fenced off and remains stock proof for the duration of this consent.	
EW29.	Notwithstanding <b>condition EW31</b> , the consent holder shall ensure those areas of the site where earthworks have been completed shall be stabilised against erosion as soon as practically possible and within a period not exceeding 14 days after completion of any works authorised by these resource consents. Stabilisation shall be undertaken by providing adequate measures (vegetative and/or structural) that will minimise sediment runoff and erosion to the satisfaction of the Manawatu-Wanganui Regional Council acting in a technical certification capacity. The consent holder shall monitor and maintain the site until vegetation is established to such an extent that it prevents erosion and prevents sediment from entering any water body.	
EW30.	The removal of any erosion and sediment control measures from any area where soil has been disturbed as a result of the exercise of these resource consents shall only occur after consultation and technical certification has been obtained from the Manawatu-Wanganui Regional Council. In this respect, the main issues that will be considered include: a. The quality of the soil stabilisation and/or covering vegetation; b. The quality of the water discharged from the rehabilitated land; and c. The quality of the receiving water.	
EW31.	Re-vegetation and/or stabilisation of all disturbed areas is to be completed in accordance with the measures detailed in the certified E&SCP.	
EW32.	The works shall remain the responsibility of the consent holder and shall be maintained so that any erosion, scour or instability of the works that is attributable to the works carried out as part of this consent is remedied by the consent holder within <b>ten (10)</b> working days.	
EW33.	The consent holder shall ensure that the site is appropriately stabilised by <b>30 April</b> of each year unless otherwise certified in writing by the Manawatu- Wanganui Regional Council. Stabilisation shall be undertaken by providing adequate measures (vegetative and/or structural and including, pavement, metalling, hydro-seeding, re-vegetation and mulching) that will minimise erosion of exposed soil to the extent practical.
