Name of Submitter: Griffins Food Ltd, 39 Ash Rd, Wiri, Manukau City 2241

This is a submission on the following proposed plan: Proposed Plan Change 2 – Existing Intensive Farming Land uses.

I could not gain an advantage in trade competition in making this submission.

The specific provisions of the proposal that my submission relates to are:

- Policy 5-8 Management and regulation of intensive farming land-use activities affecting groundwater and surface water quality
- Policy 14-3 Good management practices
- Policy 14-5 Management of intensive farming land uses
- Policy 14-6 Resource consent decision-making for intensive farming land uses
- Rules 14.1 Agricultural Activities

My submission is that:

- Not all rural production activities are equal in value to the community or equal in environmental effect. The values of vegetable growing (including potato production) for domestic food supply and security and the ability to feed people in the future is not reflected in proposed Plan Change 2.
- Nor does the Plan Change 2 adequately address the effects of climate change in maintaining the status quo land use activity mix for essential food production. The Plan Change fails to recognise the value of the Horizons-Manawatu region as a food source for the whole of New Zealand.
- A tailored approach is required for managing commercial vegetable growing land with high production values to realise its food production purpose, while achieving catchment wide water quality improvements and other environmental benefits in the longer term. This means retaining access to these unique soils and the natural resources which support them.
- Rural production systems are very diverse with a wide range of fruits, vegetables and other crops being grown across Horizons-Manawatu regional. Potato production systems rely on rotations; often enabled by sharing and leasing agreements. The existing approach in the Horizons-Manawatu region has significantly reduced the ability to undertake new leases. We are concerned that Plan Change 2 will introduce further obstacles and requires amendment to avoid wider effects that are most likely unintended
- The assessment process underpinning the proposed Plan Change 2 does not adequately provide for new growing operations to meet the future food demands. Existing production is also at threat from the restrictions on movement of activities across artificial zone and catchment boundaries.
- I support requiring all growers to operate at good management practice.
- I propose provisions be added to incentivise and enable existing areas of vegetable growing to move onto suitable land in a different catchment across the region, to account for crop rotation, leased land arrangements and to enable growers to move to less environmentally sensitive locations as they are available.
- I strongly support the ability for a group of growers to be able to manage environmental issues collectively to improve the effectiveness of their response to water quality issues. I consider Plan Change 2 should enable collaborative or collective approaches to regulating potato production

activities. This has been demonstrated as workable by the irrigation schemes and should be expressly provided for in the Plan.

- o Where this submission aligns with the PotatoesNZ and Horticulture NZ submissions, I also support those submissions.
- o Our crisp manufacturing operation is located Wiri, Manukau City, Auckland and we represent a large share of the market

Plan Change 2 is likely to affect my business in the following ways:

Increased production costs could force crisping growers from the Industry, limiting supply.

Reduction in crop yields and therefore increases in production costs per tonne will likely see price rises passed onto the consumers.

I wish to be heard in support of this submission.

If others make a similar submission, I will consider presenting a joint case with them at a hearing.
