Horizons Regional Council

Submission details on the proposed plan change 2

1. I would not gain an advantage in trade competition through this submission.
2. I own a 70ha dairy farm milking 170 cows.
3. I run a class 1 system, running 2.4 cows per ha .and my nitrogen surplus is Zero. I have extended our effluent from 10.5 ha to19.6at considerable cost. Ten years ago I started fencing and planting the waterways and is now complete. In 2023 I intend to increase my storage capacity, at considerable expense, for 90 day storage.
4. I do not have consent and I am alarmed at the cost of re-applying [already \$3500 has been spent with no result] with further Environmental Assessments, CNLMs and water quality rules that WILL be put upon me.
- 5.I find all these changes under PC2 stressful to my wife and I especially after putting so much effort into getting things right?? This is having a big impact on our community. The uncertainty of the science and monitoring, and leaching is confusing to say the least. Why not amend the one plan policy to provide a pathway to provide a discretionary consent that will give us some peace of mind and work from there.
6. I do not wish to speak at the Hearing.

My Details;

John William Thomas Lamason
